fleetboard

Independent work streams resolve into one clear F.

01 / Choose the right file

Horizontal is the primary logo. Use **stacked** in narrow layouts, **wordmark** where the name leads, and **symbol** for compact placements.

Use SVG on screens and in layouts. Transparent PNGs are supplied at 512/1024 px; horizontal PNGs at 1024/2048 px. White files have transparent backgrounds.

Use `web/favicon.*` for browser tabs and the supplied full-bleed PNGs for platform icons.

02 / Clear space

Keep **x** clear on every side.
x = the vertical stem width (40 units on the 256-unit master). Existing master padding counts toward this zone.

For the small cut, x = 48 units. Browser favicon and app tiles use their supplied fixed padding; do not add padding inside those files.

03 / Minimum sizes

Artwork	Screen width	Print width*
Horizontal	200 px	40 mm
Stacked	180 px	35 mm
Wordmark	160 px	32 mm
Symbol, regular	24 px	6 mm
Symbol, small / favicon	16 px	—

Sizes include the file canvas. Use the small cut below 24 px. *Print sizes are starting recommendations; verify a physical proof on the intended material.

04 / Backgrounds

Use the colour or ink version on white or Paper. Use the white version on Ember, Ink, and other dark surfaces.

Ember on white: **5.18:1**; Ember on Paper: **4.67:1**; Ink on Paper: **14.04:1**; white on Ink: **15.57:1**.

Keep busy imagery outside the clear space or put the logo on a solid approved tile. Use white rather than Ember for small marks on Ink.

05 / Palette

Colour	HEX	RGB	CMYK estimate†	Use
Ember	#B84A2A	184 74 42	0 60 77 28	Symbol, signature tiles
Ink	#202522	32 37 34	14 0 8 85	Wordmark, mono, dark surfaces
Paper	#F5F3EE	245 243 238	0 1 3 4	Light surfaces
White	#FFFFFF	255 255 255	0 0 0 0	Reversed artwork

†Unprofiled mathematical estimates, not press specifications. Supplied PDFs are vector RGB reference artwork. Have the printer convert using the job's ICC profile. No Pantone equivalent is assigned; approve a physical spot-colour match. Specify 100 K for one-colour black printing.

06 / Typography

The wordmark uses **DejaVu Sans Mono Bold** with custom optical spacing and outlined letters. Use the supplied paths; typing the name does not reproduce its spacing.

For supporting copy, use the system sans-serif stack. Use monospace for code and technical labels. Font licence: `source/font-license.txt`.

07 / Preserve the mark

- Scale proportionally and keep the 45° terminals.
- Use the supplied lightened white symbol on dark surfaces.
- Keep the two pieces and their channel at the fixed proportions.
- Keep colours flat; avoid outlines, shadows, gradients, rotation, or rearranging lockups.
